

Gil Baram is the Head of research at the Yuval Nee'man workshop for science, technology and security and a research fellow at the Blavatnik ICRC, Tel Aviv University.

Gil is a Ph.D. candidate in the Tel Aviv University school of Politics and International Relations, specializing in cyber conflict and national security. Currently Gil is an adjunct fellow at the Centre of Excellence for National Security, Nanyang Technological University, Singapore.

Her current research agenda focuses on national strategies during cyber conflict. She explores the reasons why – despite the fact that cyber-attacks are covert actions in nature, and therefore can be hidden or denied – in many cases countries choose to reveal the attack and “go public” about it. In her research, Gil is developing a new conceptual-theoretical framework and is examining it by combining qualitative and quantitative research methods.

Gil holds an M.A in Security Studies from Tel-Aviv University (Magna Cum Laude).

Gil's previous work has been published in journals such as the [Middle East Quarterly](#), [Foreign Affairs](#), [Military and Strategic Affairs](#), [Maa'rachot](#), [Acta Astronautica](#) and [Astropolitics](#).
