

# **Victims of Cybercrimes: Legal Aspects on Protection and Liabilities**

Stefano Fantin

The lecture will include a presentation of two European-funded projects on cybercrime and cybersecurity (DANTE and EUNITY), which opened up for a preliminary evaluation of a number of legal texts.

The study is based in fact on a functional comparative analysis of three mirroring legal texts from the European Union and Japan(respectively on counter terrorism, cyber security and privacy). The main purpose for such a research is to define a number of policy recommendations for the EU to be drawn from such legal frameworks. The lecture will touch upon one of the areas these recommendations will look at, namely the legal protection of victims and/or vulnerable groups.
